

ASSIGNMENT 7 (DUE 26 SEPTEMBER 2025)

MATH2301, SEMESTER 2, 2025

1. GENERAL REMARKS

- (1) The assignment is due on gradescope.
- (2) Please read the academic integrity policy for assignments. Remember that if you want an extension, you must ask at least 24 hours ahead of the deadline.
- (3) The words “show” and “prove” are synonyms. You may not be used to writing formal mathematical proofs, which is OK. Write a justification in plain language that would convince the reader.
- (4) If you are having trouble with any of the points, come and discuss with me in office hours. It is part of my job to help you understand this stuff, so please use my time!

2. PROBLEMS

2.1. **Problem.** Let  $\Sigma = \{0, 1\}$ . For each language  $L$  described below, write down a regular expression  $r$  such that  $L(r) = L$ . That is, the strings that match  $r$  are exactly the strings in  $L$ . Be careful to make sure that nothing else matches the regular expression you write down! Justification is not required.

- (1)  $L = \{w \in \Sigma^* \mid w \text{ starts with a } 1\}$
- (2)  $L = \{w \in \Sigma^* \mid w \text{ all the ones in } w \text{ are next to each other in a single block}\}$
- (3)  $L = \{w \in \Sigma^* \mid w \text{ contains an even number of zeroes}\}$

2.2. **Problem.** Let  $\Sigma = \{a, b, c\}$ . For each regular expression  $r$  written below, describe in words the language  $L(r)$ . Justification not required.

- (1)  $r = (\epsilon|bc|c)(abc)^*(\epsilon|a|ab)$ .
- (2)  $r = ((b|c|\epsilon)^*a(b|c|\epsilon)^*a(b|c|\epsilon)^*a(b|c|\epsilon)^*)^*$

2.3. **Problem.** Let  $\Sigma = \{0, 1\}$  and  $L$  be the language

$$L = \{w \mid \text{the number of occurrences of } 01 \text{ in } w \text{ is equal to the number of occurrences of } 10.\}$$

For example, the word 010 is in  $L$  because it has one occurrences of 01 and one of 10. The word 01101 is not in  $L$  because it has 2 occurrences of 01 but only one of 10. Does there exist a regular expression  $r$  with  $L(r) = L$ ? If yes, find one. If not, explain why not.

2.4. **Problem.** Let  $L \subseteq \Sigma^*$  be a language. The *complement* of  $L$ , denoted  $L^c$ , is the complement of  $L$  in  $\Sigma^*$ . That is, for every  $w \in \Sigma^*$ , we have  $w \in L^c$  if and only if  $w \notin L$ .

- (1) Given a DFA  $M$  recognising a language  $L = L(M)$ , explain in words how to construct a DFA  $M'$  such that  $L(M') = L^c$ .
- (2) Construct a DFA recognising the following language:

$$L = \{w \in \Sigma^* \mid \text{every odd position of } w \text{ is } 1\}.$$

(Assume that we start indexing at 1, not 0.) Justification not required.

- (3) Now use your method from the first part to draw a DFA for the complement of the language  $L$  above. Justification not required.
