Rules of Kayles

1. Knock down a single pin or two adjacent pins.
2. The player to knock down the last pin wins.

Analysing Kayles

N/P
labels

Grundy
values

Analysing Kyles

$$K_7 = \text{mex}(K_6, K_5, K_1 + K_5, K_1 + K_4, K_2 + K_4, K_2 + K_3, K_3 + K_3)$$

$$K_7 = \text{[Hand-drawn diagrams of 7 polyhedra]}$$

Analysing Kyles

$$K_7 = \text{mex}(K_6, K_5, K_1 + K_5, K_1 + K_4, K_2 + K_4, K_2 + K_3, K_3 + K_3)$$

Better to just compute K_1, K_2, K_3, \dots in order.

Grundy labels:

$K_1, K_2, K_3, K_4, K_5, K_6$

①

②

$$G + H \Rightarrow (G) \oplus (H)$$

Analysing Kyles

$$K_7 = \text{mex}(K_6, K_5, K_1 + K_5, K_1 + K_4, K_2 + K_4, K_2 + K_3, K_3 + K_3)$$

Better to just compute K_1, K_2, K_3, \dots in order.

$$K_1^1 \downarrow K_0^0$$

$$K_2^2 \swarrow K_1^1 \quad \searrow K_0^0$$

$$K_3^3 \swarrow K_2^2 \quad \searrow K_1 + K_1^0 \quad \searrow K_1^1$$

! / 0

$$K_4^1 \rightarrow K_3^3, K_2^2, K_1 + K_2^3, K_1 + K_1^0$$

$$K_5^4 \rightarrow K_4^1, K_3^3, K_2 + K_2^0, K_1 + K_3^2, K_1 + K_2^3$$

$$K_6^3 \rightarrow K_5^4, K_4^1, K_1 + K_4^0, K_1 + K_3^2, K_2 + K_3^1, K_2 + K_2^0$$

$$K_7^2$$

Now play and win!
